[Mantle convection - Wikipedia, the free encyclopedia](#)

en.wikipedia.org/wiki/Mantle_convection

Mantle convection is the slow creeping motion of Earth's solid silicate **mantle** caused by **convection currents** carrying heat from the interior of the Earth to the surface.

[Convection - Wikipedia, the free encyclopedia](#)

en.wikipedia.org/wiki/Convection

Convection is the concerted, collective movement of groups or aggregates of molecules within fluids (e.g., liquids, gases) and solids, either through advection or ...

[If convection in the mantle slowed what will slow also?](#)

[www.answers.com](#) > [Natural Disasters](#) > [Earthquakes](#)

Heating from the Earth's core drives **convection** in the upper **mantle**. This **convection** is extremely slow; the speed with which material in the Earth's crust spreads ...

[Plates moving due to convection in mantle | Plate ...](#)

<https://www.khanacademy.org/science/cosmology-and-astronomy/earth...>

What I want to do in this video is; talk a little bit about maybe why the plates are actually moving in the first place. And nothing I'm talking about in this video

[What causes the global convection current between the ...](#)

[www.answers.com](#) > [Categories](#) > [Science](#) > [Geography](#) > [Equator](#)

What causes the **global convection current between the equator** and the poles?

[When describing the mantle convection system, which is a](#)

[www.weegy.com/?ConversationId=75B00805](#)

User: When **describing the mantle convection** system, which is a good analogy? A. Using a fan to bring cool air inside on a hot day B. Warm air falling in a room C ...
