Multilevel analysis definition

Multilevel analysis is the statistical **analysis** of hierarchically and non-hierarchically nested data. The simplest example is clustered data, such as a sample of students clustered within schools. **Multilevel** data are especially prevalent in the social and behavioral sciences and in the bio-medical sciences.

What are multilevel models and why should I use them ...

www.bristol.ac.uk/cmm/learning/multilevel-models/what-why.html

In a multilevel (random effects) model, the effects of both types of variable can be estimated. Inference to a population of groups: In a multilevel model the groups in the sample are treated as a random sample from a population of groups.

Multilevel model - Wikipedia

https://en.wikipedia.org/wiki/Multilevel_model

Developing a multilevel model In order to conduct a multilevel model analysis, one would start with fixed coefficients (slopes and intercepts). One aspect would be allowed to vary at a time (that is, would be changed), and compared with the previous model in order to assess better model fit.
